SRUK/CERU was created to promote networking among the Spanish researchers working in the United Kingdom, make science and technology more accessible to the general public and establish collaborations between this community and public and private organisations related to R&D, both in Spain and in the United Kingdom [1]. SRUK/CERU focuses mainly on these four important aspects, which define the core of the society:

Social Network: creating a social network of Spanish researchers and students working in the United Kingdom. SRUK/CERU aims to facilitate the arrival of new members, by offering them advice and sharing valuable professional and personal experiences (Fig. 1).

Science Communicators: Increasing social awareness of Research and Development (R&D) and promoting a scientific culture in both British and Spanish societies. SRUK/CERU bridges the existing gap between scientists and the general public by holding multidisciplinary seminars, roundtables, conferences and an annual symposium [2].

Science Representatives: representing Spanish Researchers in the United Kingdom to British and Spanish organizations, society and the media. SRUK/CERU also aims to serve as scientific advisor for both public and private organisms, sharing the professional knowledge and experience gained over the years.

Scientific Mediators: facilitating interactions between private and public British and Spanish R&D institutions and researchers. We believe that exploring and establishing collaborations between the UK and Spain will be highly beneficial for all parts involved in the long run.

Fig. 1: A table or a figure can be included in the abstract.
